

Facility Model for Incorporating Second Step, Inc. GHS

Health South Rehabilitation, Tampa, FL

“We have treated patients with vestibular disorders, gait abnormalities, CVA, post-op THR, TKR, post amputee, TBI, and patients with a variety of lower extremity balance and coordination problems. Patients with mental dysfunction such as Alzheimer’s Disease can be safely and securely ambulated to provide important health benefits while maintaining a minimal risk to the patient, attending aide, or therapist.”

Joseph Millen, PT, MTC Program of Excellence Coordinator SORS, Palm Harbor FL

Joseph Millen, PT, MTC, has been founder and partner in Sports and Orthopedic Rehabilitation Services, the Ironman Institute, Impact Health and Performance, LLC, the American Association for Health and Performance, Director of Health, Symedica, Tampa FL, for many years. Joe states that from his perspective, the GHS is as essential in the care neurologically involved clients as a matt table.

In 2001, Joe outlined concise, clinical data for us on how the HealthSouth facility he managed benefited financially from purchasing the Gait Harness System. (See **Success Stories** under our **Clinicians** webpage, notably clients Joe, Jim, and Christina).

“The Gait Harness System is **parallel bars where you need them.**”

Joseph Millen, PT, MTC, founder, Impact Health and Performance, Palm Harbor FL

“The Isernhagen Work Report, Fall 2000, the Ergo Focus, identifies that the harness distributes the patient’s weight, reducing the stresses and compressive forces on the lower back of the caregiver during gait training activities, allowing caregivers to manage residents more easily and safely.”

Joseph Millen, PT, MTC, founder, Impact Health and Performance, Palm Harbor FL
